

Package ‘rbtc’

March 11, 2019

Title Bitcoin API

Version 0.1-6

Description Implementation of the RPC-JSON API for Bitcoin and utility functions for address creation and content analysis of the blockchain.

Depends R (>= 3.4.0)

License GPL-3

Encoding UTF-8

LazyData true

RoxygenNote 6.1.0

Imports methods, rjson, httr, openssl, gmp

NeedsCompilation no

Author Bernhard Pfaff [aut, cre]

 addnode

RPC-JSON API: addnode

Description

Attempts to add or remove a node from the addnode list. Or try a connection to a node once.

Usage

```
addnode(con, node, command = c("add", "remove", "onetry"))
```

Arguments

con	object of class CONRPC.
node	character the node (see <code>getpeerinfo()</code> for nodes).
command	character 'add' to add a node to the list, 'remove' to remove a node from the list, 'onetry' to try a connection to the node once.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#addnode>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

Other Network RPCs: [clearbanned](#), [disconnectnode](#), [getaddednodeinfo](#), [getconnectioncount](#), [getnettotals](#), [getnetworkinfo](#), [getpeerinfo](#), [listbanned](#), [ping](#), [setnetworkactive](#)

ANSRPC-class

The ANSRPC class

Description

This class definition is employed to cast the JSON-objects returned by API-calls to bitcoind.

Slots

rpcname	character the name of the API.
result	ANY the output/result of the API.
ecode	NullOrInteger the error code, in case of no error NULL.
emessage	NullOrIntegerCharacter the error message, in case of no error NULL.
id	character identifier to API-call.

Other bitcoind functions: [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

base58CheckDecode	<i>Base 58 binary-to-text-decoding</i>
-------------------	--

Description

This is a modified binary-to-text decoding used for decoding Bitcoin addresses, aka *Base58Check*. If this is applied to a WIF address and the first and last four bytes are dropped, the result is the corresponding private key.

Usage

```
base58CheckDecode(x)
```

Arguments

x character, string in hex format.

Value

list, the decoded elements of the string.

Author(s)

Bernhard Pfaff

base58CheckEncode *Base 58 binary-to-text-encoding*

Description

This is a modified binary-to-text encoding used for encoding Bitcoin addresses, aka *Base58Check*. If this is applied to an extended private key with its trailing check sum, then the result is the *Wallet Import Format*, (WIF).

Usage

```
base58CheckEncode(x)
```

Arguments

x character, string in hex format.

Value

character, the encoded string.

Author(s)

Bernhard Pfaff

bkfee	<i>Compute fee in a block</i>
-------	-------------------------------

Description

This function returns the fee of the coinbase transaction. Hereby, the mining reward has been deducted. Initially, the mining reward was 50 BTC and is halved every 210,000 blocks.

Usage

```
bkfee(con, height)
```

Arguments

con	CONRPC, configuration object.
height	integer, the height of the block.

Value

numeric

Author(s)

Bernhard Pfaff

See Also

Other UtilityFuncs: [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

blockattime	<i>Block height at time</i>
-------------	-----------------------------

Description

This function returns the block heights closest to a provided date/time (time zone is GMT).

Usage

```
blockattime(con, targetdate)
```

Arguments

con	CONRPC, configuration object.
targetdate	POSIXct, the date/time of closest block heights.

Value

data.frame: the heights, the times and the time differences (in minutes) to the provided date/time.

Author(s)

Bernhard Pfaff

See Also

Other UtilityFuncs: [bkfee](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

blockstats

Obtaining statistics of a block

Description

This function returns key statistics of a block's content, such as the time, the count of transactions, and summary statistics of the UTXOs.

Usage

```
blockstats(con, height, excoinbase = TRUE)
```

Arguments

con	CONRPC, configuration object.
height	integer, the block's height.
excoinbase	logical, whether coinbase transaction should be excluded (default is TRUE).

Value

An object of class data.frame

Author(s)

Bernhard Pfaff

BTCADR-class

S4 class BTCADR

Description

S4-class for BTC addresses, ordinarily created by a call to `createBtcAdr()`.

Slots

`privkey` character, the private key.

`wif` character, the WIF.

`pubkey` character, the 512-bit public key.

`pubhash` character, the hashed public key.

`btcadr` character, the BTC address.

`mainnet` logical, whether mainnet or testnet.

Author(s)

Bernhard Pfaff

Other BtcAddresses: [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [PubKey2PubHash](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createBtcAdr](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

clearbanned

RPC-JSON API: clearbanned

Description

Clear all banned IPs.

Usage

`clearbanned(con)`

Arguments

`con` object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#clearbanned>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other Network RPCs: [addnode](#), [disconnectnode](#), [getaddednodeinfo](#), [getconnectioncount](#), [getnettotals](#), [getnetworkinfo](#), [getpeerinfo](#), [listbanned](#), [ping](#), [setnetworkactive](#)

concatHex

Concatenate two hex strings

Description

This function concatenates two hex strings, provided without the 0x prefix, and returns a list object of the associated integers.

Usage

```
concatHex(hex1, hex2)
```

Arguments

hex1	character, a hex string.
hex2	character, a hex string.

Value

list

Author(s)

Bernhard Pfaff

References

https://en.bitcoin.it/wiki/Wallet_import_format,
<https://en.bitcoin.it/wiki/Address>

See Also

Other BtcAddresses: [BTCADR-class](#), [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [PubKey2PubHash](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [createBtcAdr](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

Examples

```
suppressWarnings(RNGversion("3.5.0"))
h1 <- "80"
h2 <- createPrivateKey()
concatHex(h1, h2)
```

conrpc

Extracting Configuration Settings

Description

This function extracts information from the configuration file `bitcoin.conf` with respect to the options `rpcuser` and `rpcpassword`.

Usage

```
conrpc(conf.file)
```

Arguments

`conf.file` character, the fully qualified path.

Value

An S4-object of class `CONRPC`.

Author(s)

Bernhard Pfaff

See Also

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

CONRPC-class	<i>The CONRPC class</i>
--------------	-------------------------

Description

S4-class for curl connections to RPC-JSON.

Details

The slots `rpcuse` and `rpcpwd` are required in the call to `curl`. Furthermore, the fully qualified path to `bitcoin.conf` (slot `config`) is required for starting and stopping `bitcoind` as daemon.

See Also

Other bitcoind functions: [ANSRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

containsPoint	<i>containsPoint-methods</i>
---------------	------------------------------

Description

Checks whether a point is on a defined elliptic curve.

Usage

```
containsPoint(curve, x, y)
```

```
## S4 method for signature 'ECPARAM,bigz,bigz'
containsPoint(curve, x, y)
```

```
## S4 method for signature 'ECPARAM,integer,integer'
containsPoint(curve, x, y)
```

```
## S4 method for signature 'ECPARAM,character,character'
containsPoint(curve, x, y)
```

Arguments

<code>curve</code>	an S4-object of class <code>ECPARAM</code> .
<code>x</code>	an S4-object of class <code>bigz</code> , the x-coordinate.
<code>y</code>	an S4-object of class <code>bigz</code> , the y-coordinate.

Value

logical

Author(s)

Bernhard Pfaff

containsPoint(curve256, Gx, Gy)
```

createBtcAdr

*Create BTC addresses***Description**

This function creates an object of S4-class BTCADR.

Usage

```
createBtcAdr(privkey, mainnet = TRUE)
```

Arguments

privkey	character, a private key.
mainnet	logical, for which net the keys should belong to.

Value

Object of S4-class BTCADR

Author(s)

Bernhard Pfaff

References<https://en.bitcoin.it/wiki/Address>

See Also

Other BtcAddresses: [BTCADR-class](#), [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [PubKey2PubHash](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

createPrivateKey	<i>Creation of a private key</i>
------------------	----------------------------------

Description

Returns a random 256-bit private key in hex notation.

Usage

```
createPrivateKey()
```

Value

character.

Author(s)

Bernhard Pfaff

References

https://en.bitcoin.it/wiki/Wallet_import_format,

createPrivateKey()
```

date2int	<i>Convert date/time to integer</i>
----------	-------------------------------------

Description

This function returns the associated integer time for a given date/time object (coercible as POSIXct object).

Usage

```
date2int(x)
```

Arguments

x POSIXct, date/time object.

Value

integer

Author(s)

Bernhard Pfaff

Examples

```
d <- "2017-03-15"  
date2int(d)
```

decodeHex	<i>Decoding of a hex string</i>
-----------	---------------------------------

Description

This function converts a hex string,, whereby the string must not contain the 0x prefix, to a list object with the associated integers as its elements.

Usage

```
decodeHex(s)
```

Arguments

s character, the hex string.

Value

list

Author(s)

Bernhard Pfaff

References

Examples

```
suppressWarnings(RNGversion("3.5.0"))  
pk <- createPrivateKey()  
decodeHex(pk)
```

decoderawtransaction *RPC-JSON API: decoderawtransaction*

Description

Return a JSON object representing the serialized, hex-encoded transaction.

Usage

```
decoderawtransaction(con, hexstring)
```

Arguments

con object of class CONRPC.
hexstring character, the transaction hex string.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getblock>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other RawTransactions RPCs: [getrawtransaction](#)

decodescript

RPC-JSON API: decodescript

Description

The decodescript RPC decodes a hex-encoded P2SH redeem script.

Usage

```
decodescript(con, redeem)
```

Arguments

con	object of class CONRPC.
redeem	character, the P2SH.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

disconnectnode	<i>RPC-JSON API: disconnectnode</i>
----------------	-------------------------------------

Description

Immediately disconnects from the specified peer node. Strictly one out of address and nodeid can be provided to identify the node.

Usage

```
disconnectnode(con, address = NULL, nodeid = NULL)
```

Arguments

con	object of class CONRPC.
address	character the IP address/port of the node.
nodeid	character The node ID (see <code>getpeerinfo()</code> for node IDs).

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

Other Network RPCs: [addnode](#), [clearbanned](#), [getaddednodeinfo](#), [getconnectioncount](#), [getnettotals](#), [getnetworkinfo](#), [getpeerinfo](#), [listbanned](#), [ping](#), [setnetworkactive](#)

Description

The following operations for EC points are available:

- doubleUp multiplying a point by itself
- +point addition
- leftmostBit highest bit value of an integer
- AND logical and-operator for two integers
- *multiplication of an integer scalar with an EC point

Usage

```
doubleUp(ecp)

## S4 method for signature 'ECPOINT'
doubleUp(ecp)

## S4 method for signature 'ECPOINT,ECPOINT'
e1 + e2

leftmostBit(x)

## S4 method for signature 'bigz'
leftmostBit(x)

AND(x, y)

## S4 method for signature 'bigz,bigz'
AND(x, y)

## S4 method for signature 'ECPOINT,bigz'
e1 * e2

## S4 method for signature 'bigz,ECPOINT'
e1 * e2
```

Arguments

ecp	point on elliptic curve
e1	point on elliptic curve, or integer
e2	point on elliptic curve, or integer
x	integer
y	integer

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

See Also

Other EllipticCurve: [ECPARAM-class](#), [ECPOINT-class](#), [EcparamOrNull-class](#), [containsPoint](#), [ecparam](#), [ecpoint](#), [isNull](#)

ecparam

Creating objects of class ECPARAM

Description

This function returns an object of S4-class ECPARAM, that does contain the parametrization of an elliptic curve.

Usage

```
ecparam(p, a, b)
```

Arguments

p	integer
a	integer
b	integer

Value

An object of S4-class ECPARAM

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

See Also

Other EllipticCurve: [ECPARAM-class](#), [ECPOINT-class](#), [EcparamOrNull-class](#), [containsPoint](#), [ecoperators](#), [ecpoint](#), [isNull](#)

Examples

```
p <- "0xFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFFC2F"
b <- "0x0000000000000000000000000000000000000000000000000000000000000007"
a <- "0x00000000000000000000000000000000000000000000000000000000000000"
curve256 <- ecparam(p, a, b)
curve256
```

ECPARAM-class

The ECPARAM class

Description

S4-class for elliptic curve parameters. Objects of this class do contain the big integer parameters of elliptic curves. Instances of this class are ordinarily created by a call to `ecparam`

Slots

p bigz, curve dimension.
a bigz, parameter.
b bigz, parameter.

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

See Also

EcpParamOrNull-class

S4 Class Union ECPARAM or NULL

Description

S4-class union of NULL or ECPARAM.

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

See Also

Other EllipticCurve: [ECPARAM-class](#), [ECPOINT-class](#), [containsPoint](#), [ecoperators](#), [ecparam](#), [ecpoint](#), [isNull](#)

ecpoint

Creating objects of class ECPOINT

Description

This function returns an object of S4-class ECPOINT, that does represent a point on an elliptic curve.

Usage

```
ecpoint(ecparam = NULL, x, y, r = NULL)
```

Arguments

ecparam	integerECPARAM
x	x-coordinate, to be coercible to bigz.
y	y-coordinate, to be coercible to bigz.
r	the order of the base point.

Value

An object of S4-class ECPOINT

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

See Also

curve256 <- ecpParam(p, a, b)
ecp <- ecpoint(curve256, x, y, r)
ecp

```

ECPOINT-class

S4 Class ECPOINT

Description

S4-class for a point on an elliptic curve. Ordinarily, objects are created by calling `ecpoint`.

Slots

```

ecparam ECPARAM
x bigz
y bigz
r bigz

```

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

getaddednodeinfo *RPC-JSON API: getaddednodeinfo*

Description

Returns information about the given added node, or all added nodes (note that onetry addnodes are not listed here)

Usage

```
getaddednodeinfo(con, node = NULL)
```

Arguments

con	object of class CONRPC.
node	character the node (see <code>getpeerinfo()</code> for nodes).

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getaddednodeinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getbestblockhash *RPC-JSON API: getbestblockhash*

Description

Returns the hash of the best (tip) block in the longest blockchain.

Usage

```
getbestblockhash(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

getblock

RPC-JSON API: getblock

Description

Returns information of a block hash. The returned level of details depends on the argument `verbosity`.

Usage

```
getblock(con, blockhash, verbosity = c("11", "10", "12"))
```

Arguments

con object of class CONRPC.
 blockhash character, the block hash.
 verbosity character, level of returned details.

Value

A S4-object of class ANSRPC.

Details If `verbosity` is '10', returns a string that is serialized, hex-encoded data for block 'hash'. If `verbosity` is '11' (the default), returns an object with information about block <hash>. If `verbosity` is '12', returns an object with information about block <hash> and information about each transaction.

getblockchaininfo *RPC-JSON API: getblockchaininfo*

Description

Returns an object containing various state info regarding blockchain processing.

Usage

```
getblockchaininfo(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

getblockcount	<i>RPC-JSON API: getblockcount</i>
---------------	------------------------------------

Description

Returns the number of blocks in the longest blockchain.

Usage

```
getblockcount(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getblockcount>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getblockhash	<i>RPC-JSON API: getblockhash</i>
--------------	-----------------------------------

Description

Returns hash of block in best-block-chain at height provided.

Usage

```
getblockhash(con, height)
```

Arguments

con	object of class CONRPC.
height	integer the height index.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

getblockheader

RPC-JSON API: getblockheader

Description

Returns the block header for a given hash string.

Usage

```
getblockheader(con, hash, verbose = TRUE)
```

Arguments

con	object of class CONRPC.
hash	character the block hash.
verbose	logical TRUE for a json object, FALSE for the hex encoded data.

Value

A S4-object of class ANSRPC.

Details

If verbose is false, returns a string that is serialized, hex-encoded data for blockheader 'hash'. If verbose is true, returns an Object with information about blockheader <hash>.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getblockheader>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getchaintips

RPC-JSON API: getchaintips

Description

Return information about all known tips in the block tree, including the main chain as well as orphaned branches.

Usage

```
getchaintips(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getchaintips>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getchaintxstats

RPC-JSON API: getchaintxstats

Description

Compute statistics about the total number and rate of transactions in the chain.

Usage

```
getchaintxstats(con, nblocks = NULL, blockhash = NULL)
```

Arguments

con	object of class CONRPC.
nblocks	integer optional, size of the window in number of blocks (default: one month).
blockhash	character optional, the hash of the block that ends the window.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

getconnectioncount *RPC-JSON API: getconnectioncount*

Description

Returns the number of connections to other nodes.

Usage

getconnectioncount(con)

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getconnectioncount>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getdifficulty *RPC-JSON API: getdifficulty*

Description

Returns the proof-of-work difficulty as a multiple of the minimum difficulty.

Usage

getdifficulty(con)

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

gethelp

RPC-JSON API: Help

Description

Returning information about RPC functions.

Usage

```
gethelp(con, rpc = "")
```

Arguments

con	object of class CONRPC.
rpc	character, name of RPC function.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#help>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other Control RPCs: [getinfo](#), [getwalletinfo](#)

getinfo

RPC-JSON API: getinfo

Description

Returning information about bitcoin configuration and settings.

Usage

```
getinfo(con)
```

Arguments

con object of class CONRPC.

Details

WARNING: getinfo is deprecated and will be fully removed in 0.16. Projects should transition to using `getblockchaininfo`, `getnetworkinfo`, and `getwalletinfo` before upgrading to 0.16.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getmempoolancestors *RPC-JSON API: getmempoolancestors*

Description

If txid is in the mempool, returns all in-mempool ancestors.

Usage

```
getmempoolancestors(con, txid, verbose = FALSE)
```

Arguments

con	object of class CONRPC.
txid	character, the transaction id (must be in mempool).
verbose	logical, TrueTRUE for a json object, FALSE for array of transaction ids (default).

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

getmempooldescendants *RPC-JSON API: getmempooldescendants*

Description

If txid is in the mempool, returns all in-mempool descendants.

Usage

```
getmempooldescendants(con, txid, verbose = FALSE)
```

Arguments

con	object of class CONRPC.
txid	character, the transaction id (must be in mempool).
verbose	logical, TrueTRUE for a json object, FALSE for array of transaction ids (default).

Value

A S4-object of class ANSRPC.

getmempoolentry	<i>RPC-JSON API: getmempoolentry</i>
-----------------	--------------------------------------

Description

Returns mempool data for given transaction.

Usage

```
getmempoolentry(con, txid)
```

Arguments

con	object of class CONRPC.
txid	character, the transaction id (must be in mempool).

Value

A S4-object of class ANSRPC.

getmempoolinfo	<i>RPC-JSON API: getmempoolinfo</i>
----------------	-------------------------------------

Description

Returns details on the active state of the TX memory pool.

Usage

```
getmempoolinfo(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getmempoolinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getnettotals	<i>RPC-JSON API: getnettotals</i>
--------------	-----------------------------------

Description

Returns information about network traffic, including bytes in, bytes out, and current time.

Usage

```
getnettotals(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

getnetworkinfo

RPC-JSON API: getnetworkinfo

Description

Returns an object containing various state info regarding P2P networking.

Usage

```
getnetworkinfo(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getnetworkinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getpeerinfo

RPC-JSON API: getpeerinfo

Description

Returns data about each connected network node as a json array of objects.

Usage

```
getpeerinfo(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getpeerinfo>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

getrawmempool	<i>RPC-JSON API: getrawmempool</i>
---------------	------------------------------------

Description

Returns all transaction ids in memory pool as a json array of string transaction ids. Hint: use `getmempoolentry` to fetch a specific transaction from the mempool.

Usage

```
getrawmempool(con, verbose = TRUE)
```

Arguments

<code>con</code>	object of class <code>CONRPC</code> .
<code>verbose</code>	logical, TRUE for a json object, FALSE for array of transaction ids

Value

A S4-object of class `ANSRPC`.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getrawmempool>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other Blockchain RPCs: [decodescript](#), [getbestblockhash](#), [getblockchaininfo](#), [getblockcount](#), [getblockhash](#), [getblockheader](#), [getblock](#), [getchaintips](#), [getchaintxstats](#), [getdifficulty](#), [getmempoolancestors](#), [getmempooldescendants](#), [getmempoolentry](#), [getmempoolinfo](#), [gettxoutproof](#), [gettxoutsetinfo](#), [gettxout](#), [preciousblock](#), [pruneblockchain](#), [verifychain](#), [verifytxoutproof](#)

getrawtransaction *RPC-JSON API: getrawtransaction*

Description

Returns the raw transaction data.

Usage

```
getrawtransaction(con, txid, verbose = FALSE)
```

Arguments

con	object of class CONRPC.
txid	character, the transaction id.
verbose	logical, type of output.

Value

A S4-object of class ANSRPC.

Details By default this function only works for mempool transactions. If the `-txindex` option is enabled, it also works for blockchain transactions. **DEPRECATED:** for now, it also works for transactions with unspent outputs. If `verbose` is `'true'`, returns an object with information about `'txid'`. If `verbose` is `'false'` or omitted, returns a string that is serialized, hex-encoded data for `'txid'`.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#getblock>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other RawTransactions RPCs: [decoderawtransaction](#)

gettxout	<i>RPC-JSON API: gettxout</i>
----------	-------------------------------

Description

Returns details about an unspent transaction output.

Usage

```
gettxout(con, txid, n, incmempool = TRUE)
```

Arguments

con	object of class CONRPC.
txid	character the transaction id.
n	integer vout number.
incmempool	logical whether to include the mempool (default TRUE).

Details

Note that an unspent output that is spent in the mempool won't appear.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#gettxout>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other Blockchain RPCs: [decodescript](#), [getbestblockhash](#), [getblockchaininfo](#), [getblockcount](#), [getblockhash](#), [getblockheader](#), [getblock](#), [getchaintips](#), [getchaintxstats](#), [getdifficulty](#), [getmempoolancestors](#), [getmempooldescendants](#), [getmempoolentry](#), [getmempoolinfo](#), [getrawmempool](#), [gettxoutproof](#), [gettxoutsetinfo](#), [preciousblock](#), [pruneblockchain](#), [verifychain](#), [verifytxoutproof](#)

gettxoutproof *RPC-JSON API: gettxoutproof*

Description

Returns a hex-encoded proof that "txid" was included in a block.

Usage

```
gettxoutproof(con, txids, blockhash = NULL)
```

Arguments

con	object of class CONRPC.
txids	character a json array of txids to filter.
blockhash	integer looks for txid in the block with this hash, (optional, default NULL).

Details

NOTE: By default this function only works sometimes. This is when there is an unspent output in the utxo for this transaction. To make it always work, you need to maintain a transaction index, using the -txindex command line option or specify the block in which the transaction is included manually (by blockhash).

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

gettxoutsetinfo *RPC-JSON API: gettxoutsetinfo*

Description

Returns statistics about the unspent transaction output set. Note this call may take some time.

Usage

```
gettxoutsetinfo(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

getwalletinfo *RPC-JSON API: getwalletinfo*

Description

Returning information about bitcoin wallet.

Usage

```
getwalletinfo(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

hash160

BTC hash160

Description

This function returns the hash by applying the sha256 hashing first and then to the resulting hash the ripemd160 algorithm.

Usage

hash160(d)

Arguments

d raw, vector.

Value

character, the value of d hashed with sha256 and ripemd160.

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Address>

hash256

BTC hash256

Description

This function returns the hash by applying the sha256 hashing algorithm twice to a raw object.

Usage

hash256(d)

Arguments

d raw, vector.

Value

character, the value of d hashed twice.

Author(s)

Bernhard Pfaff

References

int2date	<i>Convert time stamp to POSIX</i>
----------	------------------------------------

Description

This function returns the associated POSIXct time to the time stamp integer in a block header.

Usage

```
int2date(x)
```

Arguments

x integer, the block header time stamp

Value

An object of class POSIXct, POSIXt

Author(s)

Bernhard Pfaff

Examples

```
ts <- 1532954868
int2date(ts)
```

intMaxDay	<i>Integer representation of a day-end</i>
-----------	--

Description

This function returns the associated integer time for the end of a specific day (*i.e.*, 23:59:59 time).

Usage

```
intMaxDay(x)
```

Arguments

x POSIXct, date/time object.

Value

integer

Author(s)

Bernhard Pfaff

d1 <- "2017-03-15"  
d1 <- intMaxDay(d1)  
d2 <- "2017-03-15 23:59:59"  
d2 <- intMaxDay(d2)  
identical(d1,d2)
```

intMinDay	<i>Integer representation of a day-begin</i>
-----------	--

Description

This function returns the associated integer time for the start of a specific day (*i.e.*, 00:00:00 time).

Usage

```
intMinDay(x)
```

Arguments

x POSIXct, date/time object.

Value

integer

Author(s)

Bernhard Pfaff

Examples

```
d1 <- "2017-03-15"  
d1 <- intMinDay(d1)  
d2 <- "2017-03-15 00:00:00"  
d2 <- intMinDay(d2)  
identical(d1,d2)
```

<code>intRangeDay</code>	<i>Integer range within a day</i>
--------------------------	-----------------------------------

Description

This function returns the associated integer times for the start and end of a specific day.

Usage

```
intRangeDay(x)
```

Arguments

x POSIXct, date/time object.

Value

integer

Author(s)

Bernhard Pfaff

See Also

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

Examples

```
d1 <- "2017-03-15"  
intRangeDay(d1)  
intMinDay(d1)  
intMaxDay(d1)
```

intRangePeriod	<i>Integer range between two dates</i>
----------------	--

Description

This function returns the associated integer times for the start of date d1 and the end of date d2.

Usage

```
intRangePeriod(d1, d2)
```

Arguments

d1	POSIXct, date/time object.
d2	POSIXct, date/time object.

Value

integer

Author(s)

Bernhard Pfaff

d1 <- "2017-03-15"  
d2 <- "2017-04-15"  
intRangePeriod(d1, d2)  
intMinDay(d1)  
intMaxDay(d2)
```

isNull	<i>Test for empty EC point</i>
--------	--------------------------------

Description

Checks whether an EC point does exist.

Usage

```
isNull(x)
```

```
## S4 method for signature 'ECPOINT'  
isNull(x)
```

Arguments

x object

Value

logical

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Secp256k1>

See Also

Other EllipticCurve: [ECPARAM-class](#), [ECPOINT-class](#), [EcparamOrNull-class](#), [containsPoint](#), [ecoperators](#), [ecparam](#), [ecpoint](#)

listbanned	<i>RPC-JSON API: listbanned</i>
------------	---------------------------------

Description

List all banned IPs/Subnets.

Usage

```
listbanned(con)
```

Arguments

con object of class CONRPC.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#listbanned>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

NullOrCharacter-class *S4 Class Union NULL or character*

Description

S4-class union of NULL or character.

See Also

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

NullOrInteger-class *S4 Class Union NULL or integer*

Description

S4-class union of NULL or integer.

See Also

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [conrpc](#), [rpcpost](#), [startbtc](#), [stopbtc](#)

ping	<i>RPC-JSON API: ping</i>
------	---------------------------

Description

Requests that a ping be sent to all other nodes, to measure ping time. Results provided in `getpeerinfo`, `pingtime` and `pingwait` fields are decimal seconds. Ping command is handled in queue with all other commands, so it measures processing backlog, not just network ping.

Usage

```
ping(con)
```

Arguments

con	object of class CONRPC.
-----	-------------------------

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#ping>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

preciousblock	<i>RPC-JSON API: preciousblock</i>
---------------	------------------------------------

Description

Treats a block as if it were received before others with the same work. A can override the effect of an earlier one. The effects of `preciousblock` are not retained across restarts.

Usage

```
preciousblock(con, blockhash)
```

Arguments

con object of class CONRPC.
 blockhash character, the hash of the block to mark as precious.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#preciousblock>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

 PrivKey2PubKey

Create public key from private key

Description

This function creates the 512-bit public key corresponding to a private key.

Usage

```
PrivKey2PubKey(privkey, mainnet = TRUE)
```

Arguments

privkey character, the private key.
 mainnet logical, whether the WIF should correspond to the mainnet or testnet.

Value

character, the public key.

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Address>

PrivKey2Wif

Create WIF from a private key

Description

Returns the corresponding WIF key from a private key

Usage

```
PrivKey2Wif(privkey, mainnet = TRUE)
```

Arguments

privkey	character, a private key.
mainnet	logical, whether the WIF should correspond to the mainnet or testnet.

Value

character, the WIF key

Author(s)

Bernhard Pfaff

References

https://en.bitcoin.it/wiki/Wallet_import_format,

Examples

```
suppressWarnings(RNGversion("3.5.0"))  
pk <- createPrivateKey()  
PrivKey2Wif(pk)
```

pruneblockchain *RPC-JSON API: pruneblockchain*

Description

Pruning of blockchain.

Usage

```
pruneblockchain(con, height)
```

Arguments

con	object of class CONRPC.
height	integer The block height to prune up to.

Value

A S4-object of class ANSRPC.

Details

May be set to a discrete height, or a unix timestamp to prune blocks whose block time is at least 2 hours older than the provided timestamp.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#pruneblockchain>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

PubHash2BtcAdr	<i>Create BTC address from public key hash</i>
----------------	--

Description

This function returns the corresponding BTC address from a hashed public key.

Usage

```
PubHash2BtcAdr(pubhash)
```

Arguments

pubhash character, the public key hash.

Value

character, the BTC address

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Address>

See Also

Other BtcAddresses: [BTCADR-class](#), [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubKey2PubHash](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createBtcAdr](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

PubKey2PubHash	<i>Create public key hash from 512-bit public key</i>
----------------	---

Description

This function returns the associated public key hash from a 512-bit public key by using the `hash160()` function.

Usage

```
PubKey2PubHash(pubkey, mainnet = TRUE)
```

Arguments

pubkey character, the public key.
 mainnet logical, whether the WIF should correspond to the mainnet or testnet.

Value

character, the hash of a public key

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Address>

See Also

Other BtcAddresses: [BTCADR-class](#), [PrivKey2PubKey](#), [PrivKey2Wif](#), [PubHash2BtcAdr](#), [Wif2PrivKey](#), [base58CheckDecode](#), [base58CheckEncode](#), [concatHex](#), [createBtcAdr](#), [createPrivateKey](#), [decodeHex](#), [hash160](#), [hash256](#), [validBtcAdr](#)

rpcpost

HTTP post of RPC-JSON

Description

This function executes an RPC-JSON post.

Usage

```
rpcpost(con, api, plist = list())
```

Arguments

con CONRPC object, returned from conrpc().
 api character the name of the RPC function.
 plist list a named list object of the parameters for api

Value

A list object, coerced JSON answer from RPC.

Author(s)

Bernhard Pfaff

See Also

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [startbtc](#), [stopbtc](#)

setnetworkactive *RPC-JSON API: setnetworkactive*

Description

Disable/enable all p2p network activity.

Usage

```
setnetworkactive(con, state = TRUE)
```

Arguments

con	object of class CONRPC.
state	logical the network state.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#setnetworkactive>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

See Also

Other Network RPCs: [addnode](#), [clearbanned](#), [disconnectnode](#), [getaddednodeinfo](#), [getconnectioncount](#), [getnettotals](#), [getnetworkinfo](#), [getpeerinfo](#), [listbanned](#), [ping](#)

show	<i>show-methods</i>
------	---------------------

Description

Defined show-methods for S4-classes.

Usage

```
## S4 method for signature 'ANSRPC'
show(object)

## S4 method for signature 'BTCADR'
show(object)

## S4 method for signature 'ECPARAM'
show(object)
```

Arguments

object a S4-class object.

startbtc	<i>Start bitcoind server process</i>
----------	--------------------------------------

Description

This function does start the bitcoind-server process. It should only be called when no suitable RPC-JSON process is running

Usage

```
startbtc(confbtc)
```

Arguments

confbtc CONRPC object, returned from conrpc().

Details

The process is started by calling `system()`. Hereby, the options: `rpcuser`, `rpcpassword` and `conf` are used in the call to `bitcoind`.

Value

NULL

Author(s)

Bernhard Pfaff

See Also

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [stopbtc](#)

stopbtc	<i>Stop bitcoind server process</i>
---------	-------------------------------------

Description

This function stops a running bitcoind process. It calls `bitcoin-cli stop` via the R function `system()`.

Usage

```
stopbtc(confbtc)
```

Arguments

`confbtc` CONRPC object, returned from `conrpc()`.

Author(s)

Bernhard Pfaff

See Also

Other bitcoind functions: [ANSRPC-class](#), [CONRPC-class](#), [NullOrCharacter-class](#), [NullOrInteger-class](#), [conrpc](#), [rpcpost](#), [startbtc](#)

timeofblock	<i>Time of a block</i>
-------------	------------------------

Description

This function returns the time of a block in GMT.

Usage

```
timeofblock(con, height)
```

Arguments

con CONRPC, configuration object.
height integer, the height of the block.

Value

POSIXct

Author(s)

Bernhard Pfaff

txfee	<i>Compute fee of a transaction</i>
-------	-------------------------------------

Description

This function returns the implicit fee of a transaction, by computing the difference between the sum of its inputs and the sum of its outputs.

Usage

txfee(con, txid)

Arguments

con CONRPC, configuration object.
txid character, the id of the transaction.

Value

numeric

Author(s)

Bernhard Pfaff

See Also

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txids](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

txids	<i>Retrieve TX Ids in block</i>
-------	---------------------------------

Description

This function retrieves the transaction IDs in a block.

Usage

```
txids(con, height, excoinbase = TRUE)
```

Arguments

con	CONRPC, configuration object.
height	integer, the block's height.
excoinbase	logical, whether coinbase transaction should be excluded (default is TRUE).

Value

character

Author(s)

Bernhard Pfaff

See Also

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txinids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

txinids	<i>Retrieving the input transaction IDs</i>
---------	---

Description

This function returns the transaction IDs of the inputs for a given transaction.

Usage

```
txinids(con, txid)
```

Arguments

con	CONRPC, configuration object.
txid	character, the id of the transaction.

Value

data.frame, the transaction ID(s) and the position(s) of the previous UTXO(s).

Author(s)

Bernhard Pfaff

See Also

Other UtilityFuncs: [bkfee](#), [blockattime](#), [blockstats](#), [date2int](#), [int2date](#), [intMaxDay](#), [intMinDay](#), [intRangeDay](#), [intRangePeriod](#), [timeofblock](#), [txfee](#), [txids](#), [txstats](#), [utxoage](#), [utxotype](#), [utxovalue](#)

txstats

Statistics of a transaction

Description

This function returns key statistics/characteristics of a transaction.

Usage

```
txstats(con, txid)
```

Arguments

con	CONRPC, configuration object.
txid	character, the id of the transaction.

Value

data.frame

Author(s)

Bernhard Pfaff

utxoage	<i>Age of UTXOs</i>
---------	---------------------

Description

This function returns a `difftime` object measuring the elapsed time(s) between the UTXO(s) in a transaction and its input(s) (previous UTXO(s)).

Usage

```
utxoage(con, txid, units = c("auto", "secs", "mins", "hours", "days",
    "weeks"))
```

Arguments

<code>con</code>	CONRPC, configuration object.
<code>txid</code>	character, the id of the transaction.
<code>units</code>	character, the time difference units; passed to <code>difftime()</code> .

Value

`difftime`

utxotype	<i>Retrieving types of UTXOs</i>
----------	----------------------------------

Description

This function returns the types of the UTXO(s) in a transaction.

Usage

```
utxotype(con, txid)
```

Arguments

con CONRPC, configuration object.
txid character, the id of the transaction.

Value

character

Author(s)

Bernhard Pfaff

See Also

utxovalue

Retrieving values of UTXOs

Description

This function returns the values of UTXO(s) in a transaction.

Usage

```
utxovalue(con, txid)
```

Arguments

con CONRPC, configuration object.
txid character, the id of the transaction.

Value

numeric

Author(s)

Bernhard Pfaff

See Also

`validBtcAdr`*Validate S4-class BTCADR*

Description

This function validates objects of S4-class BTCADR. Hereby, checks are conducted with respect to the first character of the addresses; their consistency with the net version and the correspondence of the checksums.

Usage

```
validBtcAdr(object)
```

Arguments

object BTCADR object

Author(s)

Bernhard Pfaff

References

<https://en.bitcoin.it/wiki/Address>

`verifychain`*RPC-JSON API: verifychain*

Description

Verifies blockchain database.

Usage

```
verifychain(con, checklevel = NULL, nblocks = NULL)
```

Arguments

con	object of class CONRPC.
checklevel	integer (optional, 0-4, default=3), how thorough the block verification is. a json array of txids to filter.
nblocks	integer (optional, default=6, 0=all), the number of blocks to check.

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#verifychain>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

verifytxoutproof	<i>RPC-JSON API: verifytxoutproof</i>
------------------	---------------------------------------

Description

Verifies that a proof points to a transaction in a block, returning the transaction it commits to and throwing an RPC error if the block is not in our best chain.

Usage

```
verifytxoutproof(con, proof)
```

Arguments

con	object of class CONRPC.
proof	character the hex-encoded proof generated by <code>gettxoutproof</code> .

Value

A S4-object of class ANSRPC.

Author(s)

Bernhard Pfaff

References

<https://bitcoin.org/en/developer-reference#verifytxoutproof>, <https://bitcoin.org/en/developer-reference#remote-procedure-calls-rpcs>

Wif2PrivKey

Create private key from WIF

Description

Returns the corresponding private key from a WIF key.

Usage

Wif2PrivKey(wif)

Arguments

wif character, a WIF key.

Value

character, the corresponding private key.

Author(s)

Bernhard Pfaff

References

https://en.bitcoin.it/wiki/Wallet_import_format,
